DESCRIPTION

Ballfield Dry absorbant is a fast way to make wet unusable playing fields dry and safe to use. It absorbs 350 times its own weight. The particles in this product are designed specifically to pick up the most water possible without becoming muddy. Ballfield Dry Absorbant will make wet slippery or uneven surfaces *dry *hard *even and *not slippery.

DIRECTIONS

Large Area or flat surface. Simply open container and apply to wet area or puddles. Spread with a rake or shovel to cover entire area. Only use enough to dry area. Wait only a few minutes. If area is still wet, apply additional absorbant. As soon as area is dry, play can resume.

Puddles: Uneven soil can be hazardous to run or walk over and create areas prone to puddling. This absorbant is designed to quickly pick up moisture AND quickly fill holes with a hard -playable even surface. Use enough to collect moisture in hole. Fill an area slightly higher than the hole. Tamp down or flatten to form a hard dry surface. The absorbant will hold the water and release it over time. As soon as mound is filled and hard, resume play.

OTHER USES Oil/Water absorbant: - Traction/anti-slip

**CAUTION: KEEP OUT OF REACH OF CHILDREN
HARMFUL IF SWALLOWED**
